## PoE Desk & Work Station Integrations

### Transform your workspace with PoE integration

With the enhanced technological capabilities of Inspextor by MHT, your desk is transformed from a mere furniture piece into a dynamic hub for productivity and comfort.

Utilizing a PoE infrastructure, desks, laptops, up to four ThinLab monitors (or two monitors from other brands), and VoIP phones can all be powered and managed on the same low voltage system. This streamlined setup allows for efficient installation by certified low voltage contractors, ensuring professional and safe integrations without core drilling and x-rays.

From providing detailed usage reports to enabling personalized adjustments for comfort, the workstation harmonizes technology with the employee's productivity needs. Leverage built-in sensors to understand the real-time temperature, occupancy, and humidity at each desk, allowing employees to choose a workspace that best fits their specific requirements.

### Valued Outcomes:

- Improved productivity
- Streamlined power and connectivity
- Enhanced flexibility and adaptability
- Energy efficiency and cost savings
- Intelligent integrations and telemetry data
- Centralized management and automation

### Features:

- Charge a laptop, power up to 4 monitors, and provide Ethernet connection to the edge.
- Powered 100% by PoE
- Compatible with Inspextor Software
- Integrate various desktop management programs
- Various occupancy and temperature sensors available
- **...and more!**
